Art Unit: 1722

The disclosure is objected to because of the following informalities: paragraph 4, line 1, "DE 196 31 482" should be changed to --DE 198 31 482--. Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Hehl (US Patent 6,394,780).

Hehl discloses an injection unit for an injection molding machine comprising a plasticizing barrel 11, a screw 12 received in the barrel, an electromotive rotary drive R for driving the screw to rotate about a rotation direction, said rotary drive being supported for joint movement with the screw, the stator 44 and rotors 43 of the drive R forming guideways for the drive R, an electromechanical injection stroke drive E for longitudinal movement of the screw and the rotary drive, a linear guide 14 for guiding a longitudinal movement of the injection stroke drive, and a housing shell 16 (forming a hollow carrier) constructed for torsional stiffness and accommodating the rotary drive for movement in the direction of the injection stroke, wherein the plasticizing barrel and the injection stroke are connected by the housing shell in a tension-proof manner via the housing shell on the linear guide.
